Table of Contents

File Systems

Available file systems

On the DEEP-EST system, three different groups of file systems are available:

- the ?JSC GPFS file systems, provided via ?JUST and mounted on all JSC systems;
- the DEEP-EST parallel BeeGFS file systems, available on all the nodes of the DEEP-EST system;
- the file systems local to each node.

The users home folders are placed on the shared GPFS file systems. With the advent of the new user model at JSC (?JUMO), the shared file systems are structured as follows:

- $HOME: each JSC user has a folder under `/p/home/jusers/`, in which different home folders are available, one per system he/she has access to. These home folders have a low space quota and are reserved for configuration files, ssh keys, etc.
- $PROJECT: In JUMO, data and computational resources are assigned to projects: users can request access to a project and use the resources associated to it. As a consequence, each user can create folders within each of the projects he/she is part of (with either personal or permissions to share with other project members). For the DEEP project, the project folder is located under `/p/project/cdeep/`. Here is where the user should place data, and where the old files generated in the home folder before the JUMO transition can be found.

The DEEP-EST system doesn't mount the $SCRATCH file systems from GPFS, as it is expected to provide similar functionalities with its own parallel and local file systems.

The following table summarizes the characteristics of the file systems available in the DEEP-EST and DEEP-ER (SDV) systems. **Please beware that the `$project` (all lowercase) variable used in the table only represents any JuDoor project the user might have access to, and that it is not really exported on the system environment.** For a list of all projects a user belongs to, please refer to the user's ?JuDoor page. Alternatively, users can check the projects they are part of with the `jutil` application:

```
$ jutil user projects -o columns
```

Mount Point	User can write/read to/from	Cluster	Type	Global / Local	SW Version	Stripe Pattern Details	Maximum Measured Performance (see footnotes)	Description	Other
/p/home	/p/home/jusers/$USER	SDV, DEEP-EST	GPFS exported via NFS	Global				JUST GPFS Home directory; used only for configuration files.	
/p/project	/p/project/$project	SDV, DEEP-EST	GPFS exported via NFS	Global				JUST GPFS Project directory; GPFS main storage file system; not suitable for performance relevant applications or benchmarking	
/arch	/arch/$project	login node only (deepv)	GPFS exported via NFS	Global				JUST GPFS Archive directory; Long-term storage solution for data not used in a long time; Data migrated to tape - not intended for lots of small files. Recovery can take days.	If you plan to use the archive, please get in contact to the system administrators (e.g. via the support mailing list). You can find further information and some hints on using the archive ?here.
/work	/work/$project	DEEP-EST	BeeGFS	Global	BeeGFS 7.1.2			Work file system, **no backup**, hence not meant for permanent data storage	
/afsm	/afsm	SDV, DEEP-EST	BeeGFS	Global	BeeGFS 7.1.2			Work file system, **no backup**, hence not meant for permanent data storage	Due to different network connectivity to the AFSM storage the performance might differ on the different modules
/scratch	/scratch	DEEP-EST	xfs local partition	Local*				Scratch file system for temporary data. Will be cleaned up after job finishes|| *Recommended to use instead of /tmp for storing temporary files	
/nvme/scratch	/nvme/scratch	DAM partition	local SSD (xfs)	Local*				Scratch file system for temporary data. Will be cleaned up after job finishes|| *1.5 TB Intel Optane SSD Data Center (DC) P4800X (NVMe PCIe3 x4, 2.5?, 3D XPoint))	
/nvme/scratch2	/nvme/scratch2	DAM partition	local SSD (ext4)	Local*				Scratch file system for temporary data. Will be cleaned up after job finishes|| *1.5 TB Intel Optane SSD Data Center (DC) P4800X (NVMe PCIe3 x4, 2.5?, 3D XPoint))	
/pmem/scratch	/pmem/scratch	DAM partition	DCPMM in appdirect mode	Local*			2.2 GB/s simple dd test in dp-dam01		*3 TB in dp-dam[01,02], 2 TB in dp-dam[03-16] Intel Optane DC Persistent Memory (DCPMM) 256GB DIMMs based on Intel?s 3D XPoint non-volatile memory technology

/nvme	/nvme/tmp	SDV	NVMe device	Local	BeeGFS 7.1.2	Block size: 4K	1145 MiB/s write, 3108 MiB/s read 139148 ops/s create, 62587 ops/s remove*	1 NVMe device available at each SDV compute node	*Test results and parameters used stored in JUBE:
									
									`user@deep $ cd /usr/local/deep-er/sdv-benchmarks/synthetic/ior user@deep $ jube2 result benchmarks`
									
									`user@deep $ cd /usr/local/deep-er/sdv-benchmarks/synthetic/mdtest user@deep $ jube2 result benchmarks`

Stripe Pattern Details

It is possible to query this information from the deep login node, for instance:

```
manzano@deep $ fhgfs-ctl --getentryinfo /work/manzano
Path: /manzano
Mount: /work
EntryID: 1D-53BA4FF8-3BD3
Metadata node: deep-fs02 [ID: 15315]
Stripe pattern details:
+ Type: RAID0
+ Chunksize: 512K
+ Number of storage targets: desired: 4

manzano@deep $ beegfs-ctl --getentryinfo /sdv-work/manzano
Path: /manzano
Mount: /sdv-work
EntryID: 0-565C499C-1
Metadata node: deeper-fs01 [ID: 1]
Stripe pattern details:
+ Type: RAID0
+ Chunksize: 512K
+ Number of storage targets: desired: 4
```

Or like this:

```
manzano@deep $ stat -f /work/manzano
 File: "/work/manzano"
   ID: 0        Namelen: 255     Type: fhgfs
Block size: 524288     Fundamental block size: 524288
Blocks: Total: 120178676  Free: 65045470   Available: 65045470
Inodes: Total: 0          Free: 0

manzano@deep $ stat -f /sdv-work/manzano
 File: "/sdv-work/manzano"
   ID: 0        Namelen: 255     Type: fhgfs
Block size: 524288     Fundamental block size: 524288
Blocks: Total: 120154793  Free: 110378947  Available: 110378947
Inodes: Total: 0          Free: 0
```

See ?http://www.beegfs.com/wiki/Striping for more information.

Additional infos

Detailed information on the **BeeGFS Configuration** can be found ?here.

Detailed information on the **BeeOND Configuration** can be found ?here.

Detailed information on the **Storage Configuration** can be found ?here.

Detailed information on the **Storage Performance** can be found ?here.

Notes

- dd test @dp-dam01 of the DCPMM in appdirect mode:

```
[root@dp-dam01 scratch]# dd if=/dev/zero of=./delme bs=4M count=1024 conv=sync
1024+0 records in
1024+0 records out
4294967296 bytes (4.3 GB) copied, 1.94668 s, 2.2 GB/s
```

- The /work file system which is available in the DEEP-EST prototype, is as well reachable from the nodes in the SDV (including KNLs and ml-gpu nodes) but through a slower connection of 1 Gb/s. The file system is therefore not suitable for benchmarking or I/O task intensive jobs from those nodes
- Performance tests (IOR and mdtest) reports are available in the BSCW under DEEP-ER → Work Packages (WPs) → WP4 → T4.5 - Performance measurement and evaluation of I/O software → Jülich DEEP Cluster → Benchmarking reports: ?https://bscw.zam.kfa-juelich.de/bscw/bscw.cgi/1382059
- Test results and parameters used are stored in JUBE:

```
user@deep $ cd /usr/local/deep-er/sdv-benchmarks/synthetic/ior
user@deep $ jube2 result benchmarks

user@deep $ cd /usr/local/deep-er/sdv-benchmarks/synthetic/mdtest
user@deep $ jube2 result benchmarks
```
