Title: Latest news on the DEEP-EST prototype system

Subject: DEEP - Public/User_Guide/News

Version: 37

Date: 19.05.2024 11:53:18

Table of Contents

Latest news on the DEEP-EST prototype system	3
System hardware	3
CM nodes	3
ESB nodes	3
DAM nodes	3
Network Federation Gateways	3
Global resources	3
File Systems	3
System software	3
SW updates	3
User management	3
BeeGFS Quotas	3

Latest news on the DEEP-EST prototype system

This is a summary of the latest news concerning the system. For a list of known problems related to the system, please refer to [this page](#).

Last update: 2020-09-07

System will be in maintenance in CW37 (Monday, 2020-09-07 to Friday 2020-09-11)

System hardware

CM nodes

ESB nodes

- remaining two ESB racks have been installed: now 75 ESB nodes present
- currently connected via IB EDR, to be changed to Extoll network later this year

DAM nodes

- all nodes still run in app-direct mode for the DCPMM (see [#2366](#))
- BIOS update is being tested and will be rolled out to all DAM nodes soon

Network Federation Gateways

- two gateway nodes for IB ↔ Extoll bridging between CM/ESB and DAM are available for the users
- for an example on how to use the gateway nodes and for further information, please refer to the [batchsystem](#) wiki page.

Global resources

File Systems

- DEEP-EST storage is being rebuilt in CW37 for performance reasons
 - affecting `/usr/local` and `/work`
 - BeeGFS servers and clients will be updated
- **Due to the BeeGFS updates for the DEEP-EST storage the SDV will be de-coupled meaning that after CW37 the SDV nodes will only mount `/sdv-work` (not `/work`) and the DEEP-EST nodes will only mount `/work` (not `/sdv-work`)**
- BeeGFS (`/work`) will get user quotas (see section "User management")
- It is possible to access the `$ARCHIVE` file system from the `deepv` login node under `/arch`. For more information about `$ARCHIVE`, please refer to the [Filesystems page](#) and see also the hint in the MOTD for efficient usage of the archive filesystem
- DCPMM usage within BeeGFS currently being tested on `dp-dam03`
 - more tests (with CentOS 8) to follow

System software

SW updates

- new SLURM features are being integrated and will be rolled out in near future:
 - extended logging and improved resource management for jobs within a workflow
 - burst buffer pluggin
- new 2020a Easybuild stage is currently being set up
- new ParaStationMPI version (5.4.6-1) has been installed and is used as default now

User management

BeeGFS Quotas

- a quota for the BeeGFS file system (mounted to `/work`) is being implemented
