## Latest news on the DEEP-EST prototype system

This is a summary of the latest news concerning the system. For a list of known problems related to the system, please refer to [this page](#).

*Last update: 2020-12-03*

### System hardware

#### ESB nodes

- in CW51 the first ESB rack will be updated to use Extoll network (instead of IB)

#### DAM nodes

- Persistent memory for nodes dp-dam[03-16] will be extended to 3 TB with next maintenance (CW51)

#### Network Federation Gateways

- Gateway nodes will be completed in CW51 to the final layout:
- 2 NF-GW EDR/Fabri3
- 2x NF-GW 40GbE/Fabri3
- 2x NF-GW EDR/40GbE
- for an example on how to use the gateway nodes and for further information, please refer to the [batchsystem](#) wiki page.

#### Global resources

##### NAM

- a NAM SW implementation has been done, a test environment on the DAM is being set up (using dp-dam[03,04])

#### File Systems

- **a new All Flash Storage Module (AFSM) is going to be added to the system in January 2020**
- DEEP-EST storage has been rebuilt for performance reasons
  - BeeGFS servers and clients have been updated
  - the SDV is de-coupled now meaning that the SDV nodes do not mount `/work` anymore and the DEEP-EST (CM,DAM,ESB) nodes only mount `/work` (not `/sdv-work`)
- BeeGFS (`/work`) user quotas is in place now (see section "User management")
- It is possible to access the `$ARCHIVE` file system from the `deepv` login node under `/arch`. For more information about `$ARCHIVE`, please refer to the [Filesystems page](#) and see also the hint in the MOTD for efficient usage of the archive filesystem
- DCPMM usage within BeeGFS currently being tested on `dp-dam03`
  - more tests (with different kernel versions) being done

### System software

#### SW updates

- new SLURM features are being integrated and will be rolled out in near future:
  - extended logging and improved resource management for jobs within a workflow
  - burst buffer pluggin
- 2020 Easybuild stage is currently being set up
- Intel oneAPI Beta 10 version has been installed to `/usr/local/intel/oneapi`

#### User management

##### BeeGFS Quotas

- a quota for the BeeGFS file system (mounted to `/work`) has been implemented
  - thresholds still to be defined
