This page is intended to give a short overview on known issues and to provide potential solutions and workarounds to the issues seen.

Last update: 2022-10-21

Please, use the support mailing list `sup(at)deep-sea-project.eu` to report any issues

To stay informed, please refer to the [News page](#). Also, please pay attention to the information contained in the "Message of the day" displayed when logging onto the system. The system status is reported on [?JSC status](#) as well.

Detected HW and node issues

CM nodes

- dp-cn25: SEL ProblemsFW issues ([#2769](#))
- dp-cn30: Image update needed ([#2991](#))
- dp-cn[47-50]: BeeOnd testbed

DAM nodes

- dp-dam02: reserved for FPGA tests
- dp-dam16: testbed

ESB nodes

- dp-esb[07]: testbed
- dp-esb[11]: memory issues ([#2857](#))
- dp-esb[31]: GPU issues ([#2949](#))
- dp-esb[47]: SEL Problems ([#2998](#))
- dp-esb[75]: Image update needed

SDV nodes

- deeper-sdv cluster nodes (Haswell) have been taken offline: deeper-sdv[01-16]
 - not included in SLURM anymore
 - deeper-sdv[09-10] used for testing (please contact `j.kreutz(at)fz-juelich.de` if you would like to get access)
- knl01: serves as golden client for imaging only
- dp-sdv-esb[01,02]: will only be powered on demand

Software issues

Cuda and Rocky 8.6

New CUDA drivers on the compute nodes. In case of problems, please manually prepend your `LD_LIBRARY_PATH` (first for `libcuda`, second for `libcublas`, `fft`, etc.):

```
ln -s /usr/lib64/libcuda.so.1 .
ln -s /usr/lib64/libnvidia-ml.so.1 .
LD_LIBRARY_PATH=./usr/local/cuda/lib64:$LD_LIBRARY_PATH srun <srun_args> <exe> <exe_args>
```

nvidia profiling tools

- to launch the tools on a compute node using X-Forwarding another SSH session is needed:

```
srun --forward-x -p dp-esb -N 1 -n 1 --pty /bin/bash -i
ssh -X -J <your account>@deep.zam.kfa-juelich.de <your account>@<the node you received>
```

- you will still see a warning "OpenGL Version check failed. Falling back to Mesa software rendering.", but the profiling tool (e.g. `nsight-sys`) should start up
