Welcome to the DEEP-EST Early Access Programme!

This tutorial will guide your first steps on our prototype machine. If you are new in the Modular Supercomputing area (or just interested in our roadmap) you should have a look at the section our MSA roadmap.

Get an account on our system

The first thing to do, before starting the "real work" on the machine is to get an account. Each EAP application will be counted as one project (regarding accounting, ressources, disk space, etc.).

You already have an account? Then let's get started on the DEEP-EST prototype!

- System Overview
- Software environment
- Filesystems
- Information about the batchsystem
- ParaStation MPI?
- Heterogeneous jobs
